Exploring Data and Find Insights

What patterns exist?

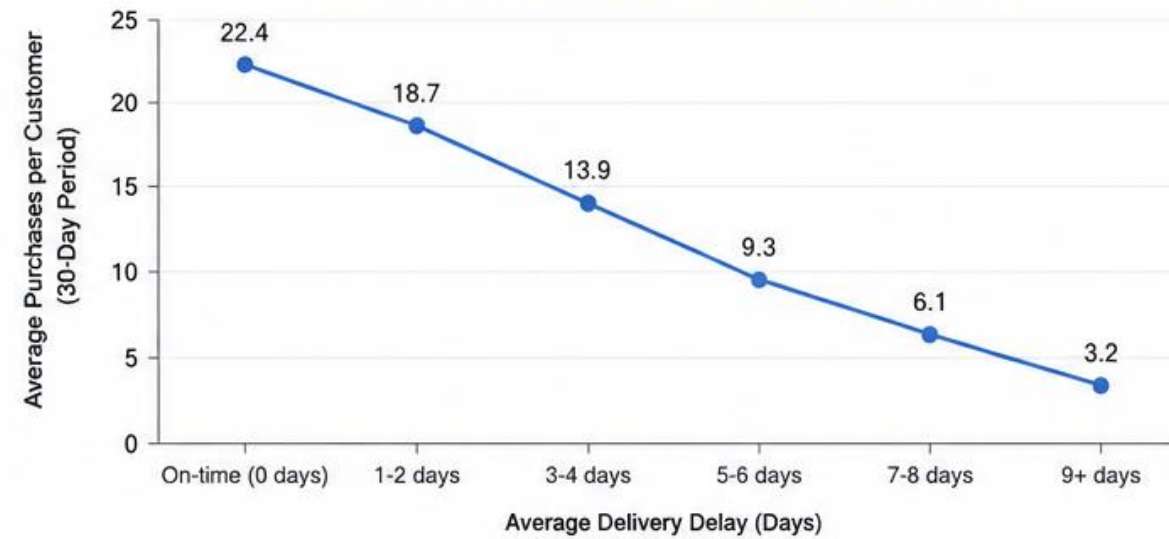

What trends are increasing?

Which products are selling more?

Which customers are leaving?

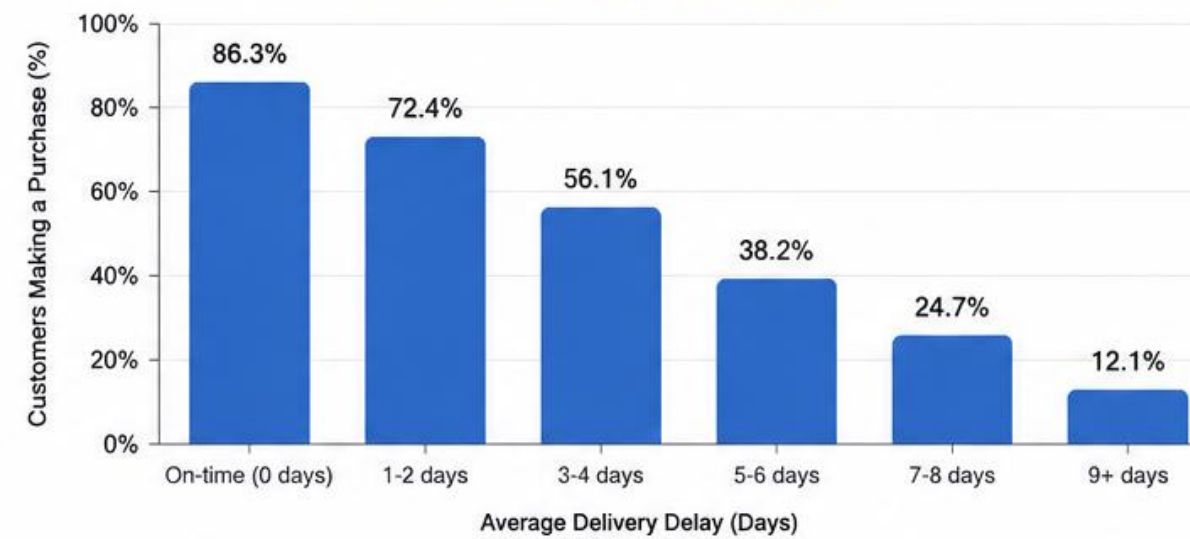

Interpreting the Insights of Analysis

1. Purchases Drop Sharply as Delivery Delays Increase

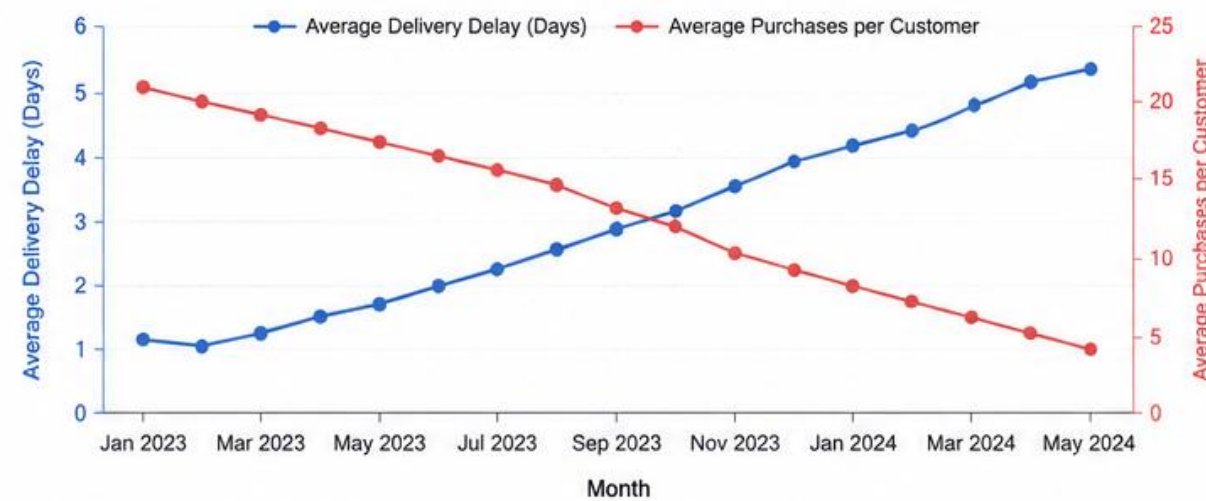

Customers place 85.7% fewer purchases when delays exceed 9 days compared to on-time deliveries.

2. Purchase Rate by Delay Category

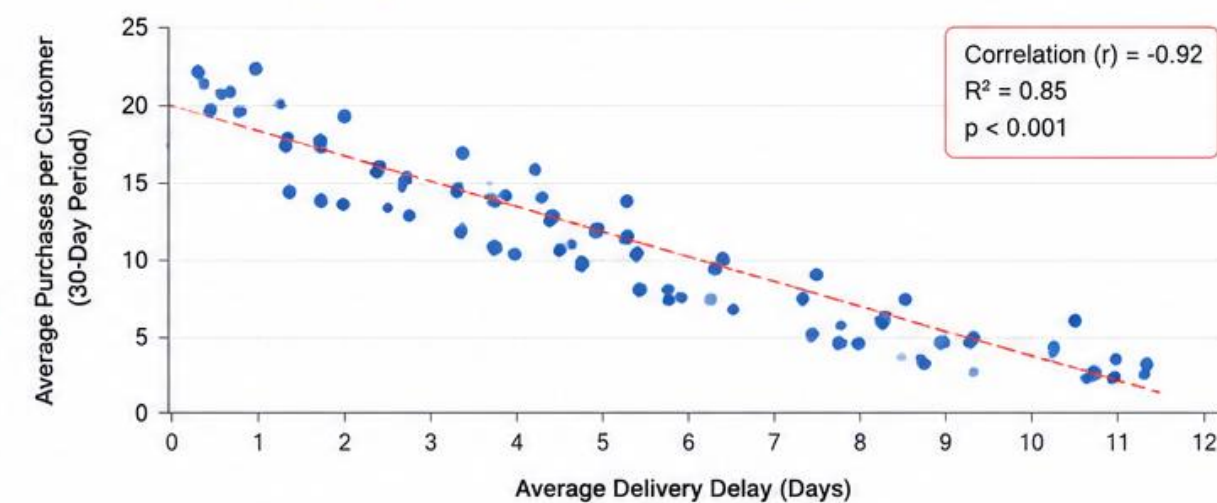

Only 12.1% of customers make a purchase when delivery is delayed by more than 9 days.

3. Over Time: More Delays, Fewer Purchases

As average delivery delays increased from 1.2 to 5.6 days, average purchases per customer dropped by 81%.

4. Strong Negative Correlation Between Delays and Purchases

There is a very strong negative correlation ($r = -0.92$) between delivery delays and customer purchases.

Impact of Delivery Time on Customer Ratings & Complaints

i Key Finding: When delivery time exceeds **45 minutes**, customer ratings drop sharply and complaints increase significantly.

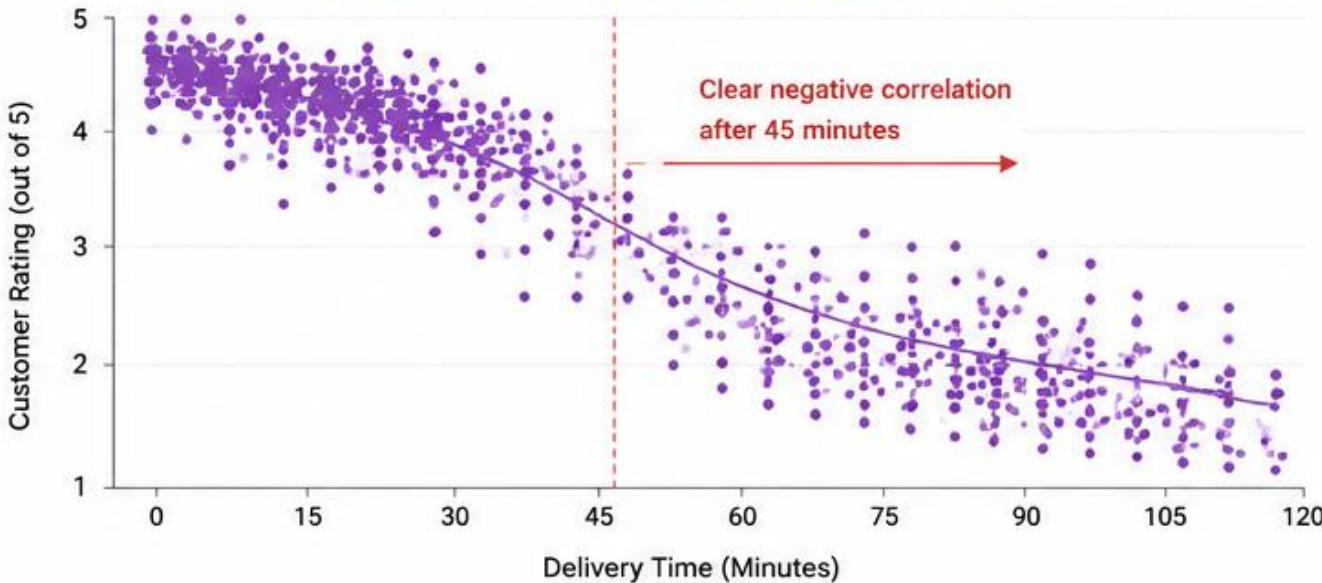

1. Average Customer Rating by Delivery Time

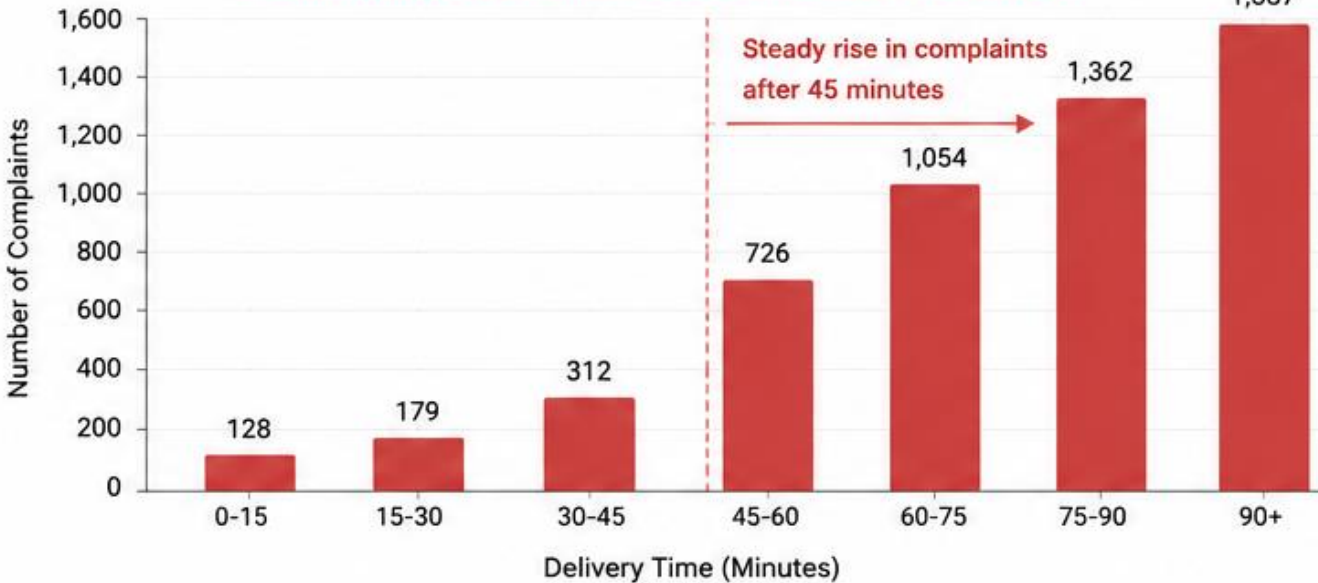

2. Complaint Rate by Delivery Time

3. Ratings vs Delivery Time (Detailed View)

4. Complaints Over Time Based on Delivery Duration

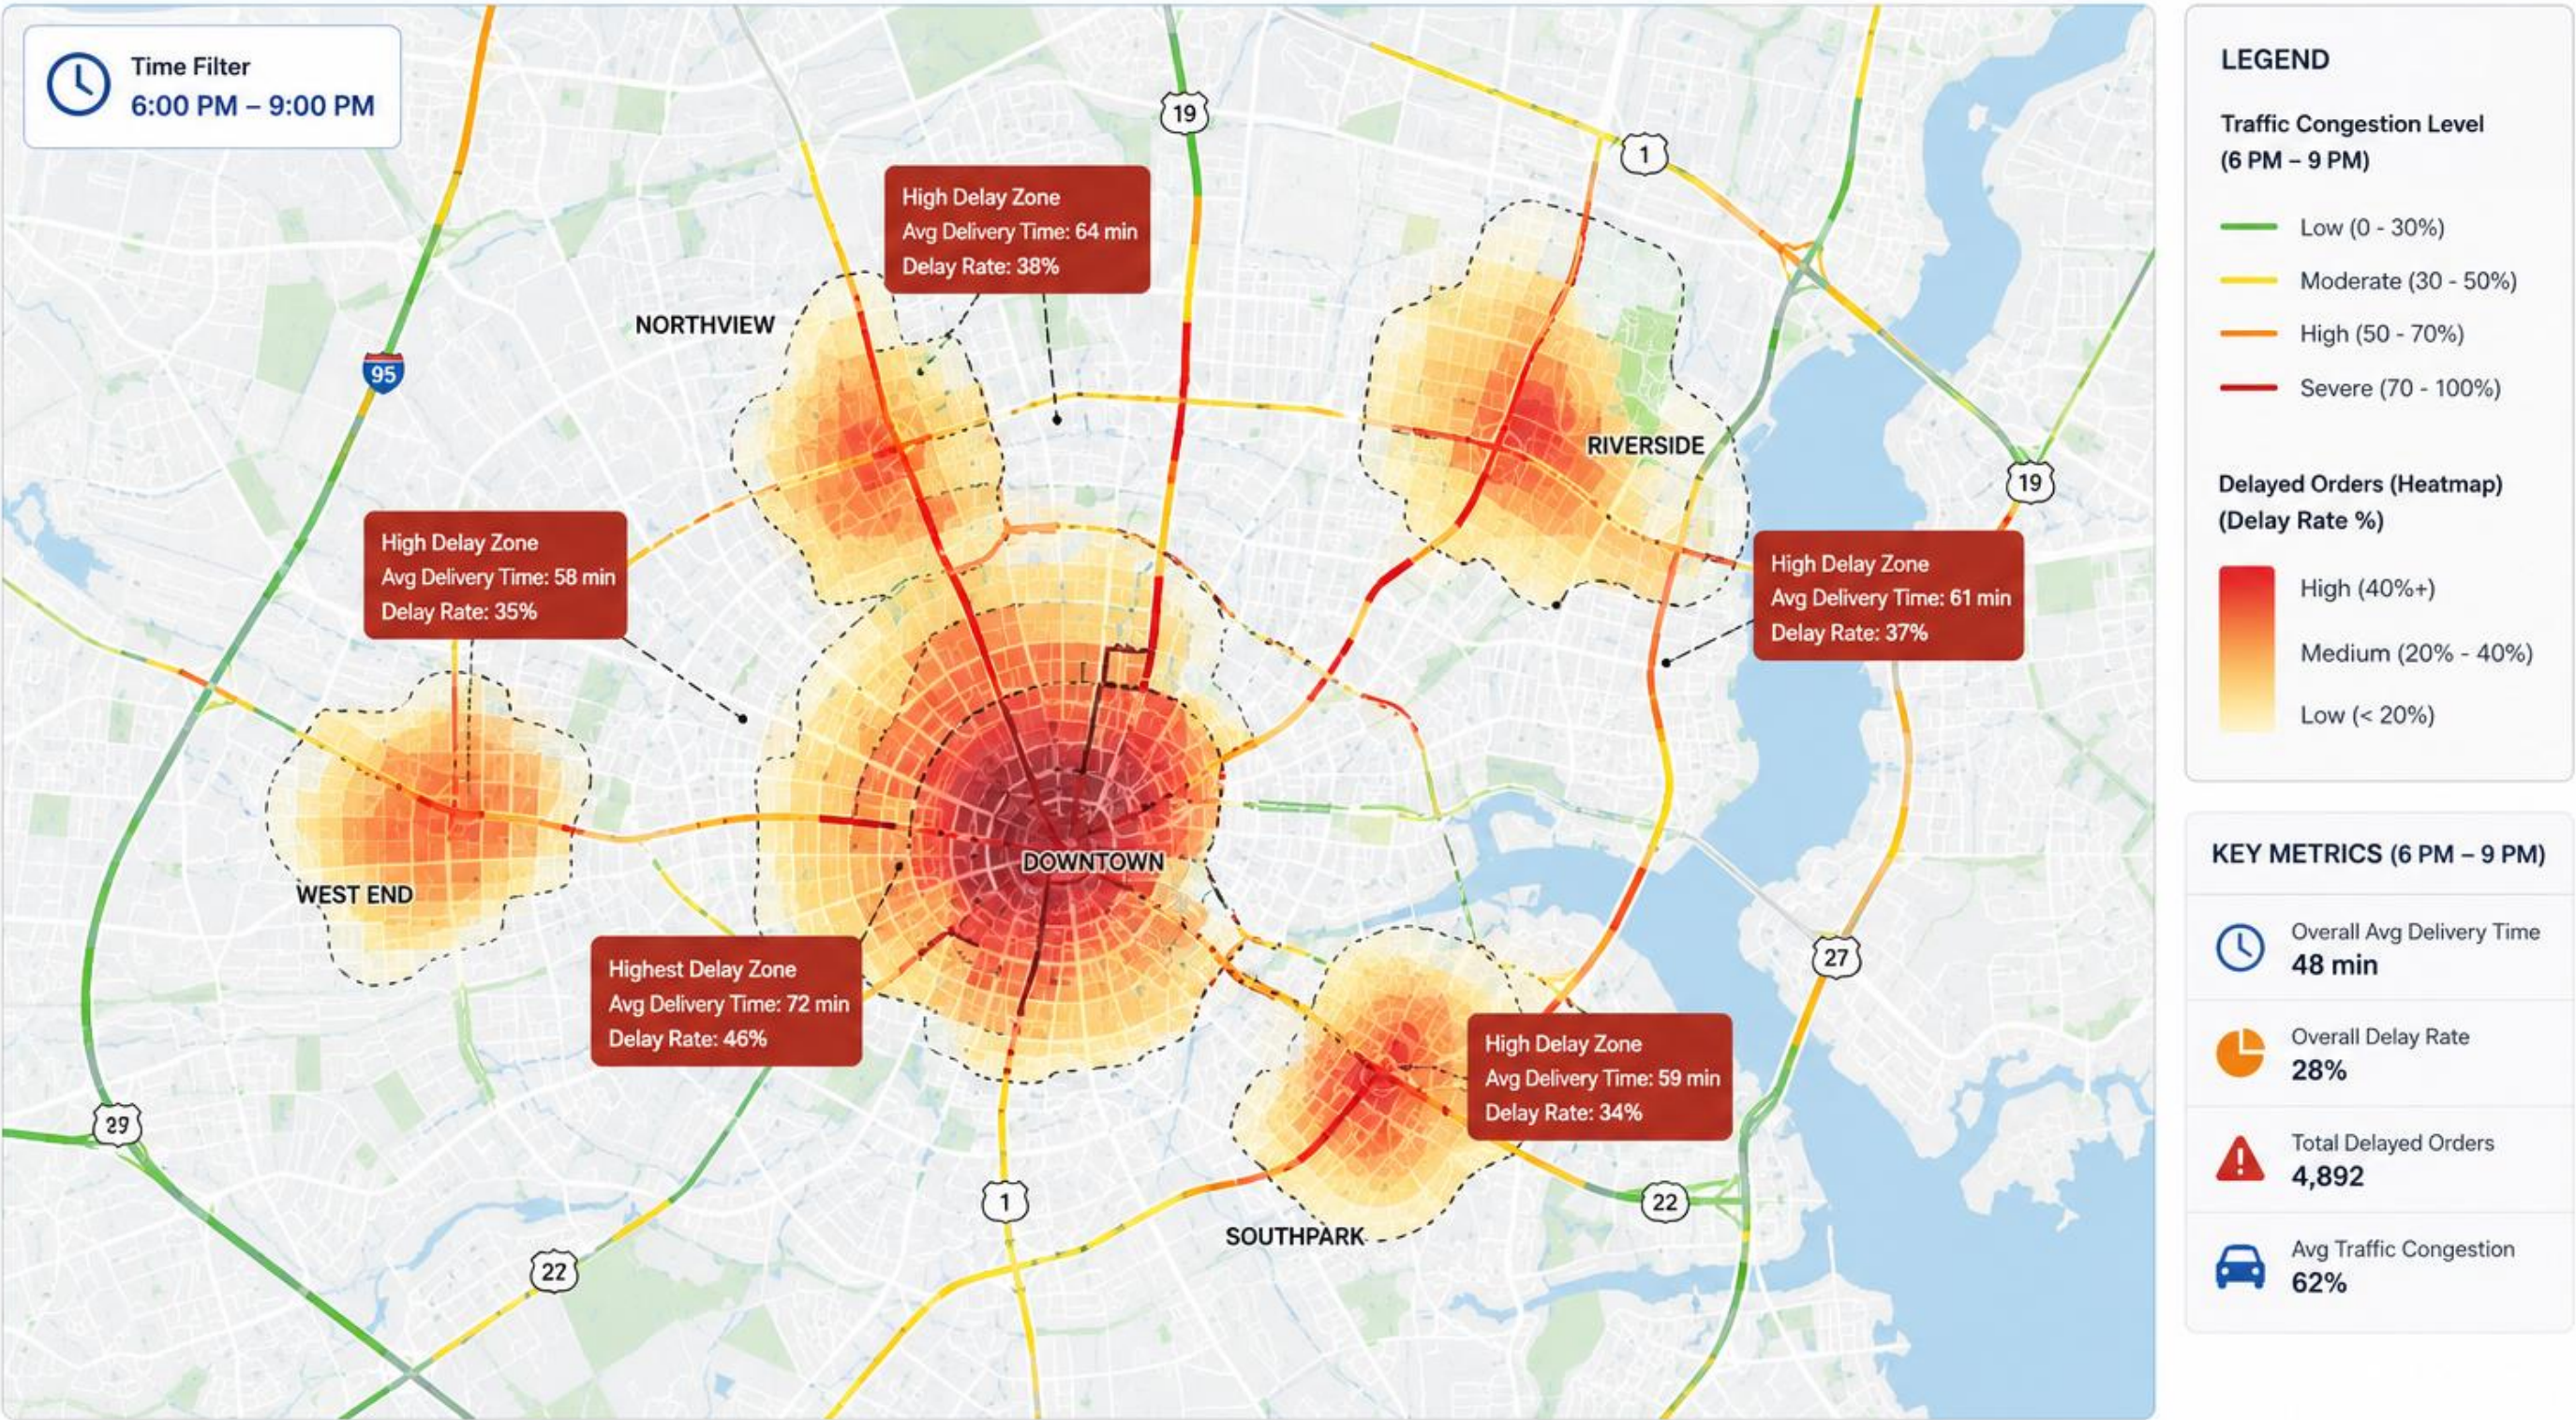

SUMMARY INSIGHT

Delivery time is strongly correlated with customer satisfaction. Exceeding 45 minutes leads to a sharp decline in ratings and a significant increase in complaints.

Delayed Orders & Traffic Congestion Map (6 PM – 9 PM)

Most delayed orders occur in specific city areas during evening hours, coinciding with severe traffic congestion.

INSIGHT: High delay zones align with areas of severe traffic congestion between 6 PM and 9 PM, causing longer delivery times and more delayed orders.
